

**Product Features**

P1dB's P1CA-29M29M-400PT-48 is a 50 Ohm precision test cable operating to 40 GHz. This high performance test cable provides excellent phase and amplitude stability during flexure. With 2.92mm stainless steel connectors, the assembly is 48 inch long and operates to 40 GHz. Typical VSWR up to 40 GHz is 1.25 (1.35 maximum). Typical insertion loss to 40 GHz for this 48 inch assembly is 4.5 dB. Phase stability vs flexure (degrees) is +/- 4.95 typical (7.90 maximum). Amplitude stability vs flexure (dB) is +/-0.06 typical (0.15 maximum). Velocity of propagation is 74 %. The cable outer diameter is 0.400 inch (10.4mm) and features a braided jacket over extra braided strength and crush resistance layers.
